Bending upwards

- **Job ad recovery continues in early 2026**
- **Some signs of skills mismatch**
- **Manufacturing job ads lift**
- **Less so in the services sector**

	Jan-24	Jan-25	Nov-25	Dec-25	Jan-26
m/m % change	-2.9	0.3	1.5	1.5	1.3
m/m % change (s.a.)	-2.4	2.9	2.8	0.2	3.4
3m/3m	-9.0	-0.5	4.0	4.3	4.4
Ann % change (m/m)	-26.3	-18.8	9.3	10.7	11.7
Ann % change (3m/3m)	-26.4	-21.5	7.5	9.2	10.6

All data is the trend unless otherwise indicated

Job ads continued to trend higher in January. Combined with the upward revision to December, it is encouraging to see consecutive months of improvement in the number of roles advertised on SEEK. Total ads for the last three months (Nov – Jan) are up 4.4% on the previous three months (Aug- Oct).

Trending up

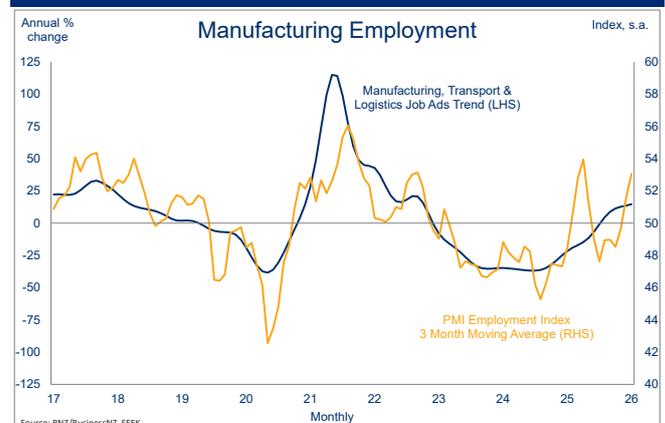

Official labour market data for Q4 painted a mixed picture. Employment growth was positive for the first time in 18 months, alongside a lift in the participation rate, which saw the unemployment rate tick up to 5.4%. There was the usual lag between an increase in vacancies and employment growth, reflecting the time it takes for roles to be filled and work to commence.

The contrast between more job ads and a lifting unemployment rate suggests some skills mismatch in the

labour force. We are wary of the growing proportion of firms reporting they are already finding it harder to source workers. This was particularly prevalent for skilled labour in the December Quarterly Survey of Business Opinion (QSBO). Although New Zealand’s labour market is only just starting to turn, this is worth keeping a close eye on.

Overall, the solid improvement in job ads in recent months supports our forecasts for further employment growth ahead. Coincident indicators such as the Performance of Manufacturing Index (PMI) also point to improving labour market conditions. The PMI employment index has been back above the breakeven 50 mark for the last three months and suggests net labour hiring in the sector. This is backed up by ads in Manufacturing, Transport & Logistics, which were 13.6% above year earlier levels over the same period.

Hiring

The lift in ads has not been uniformly felt across industries. The service sector has lagged behind, with job ads for Nov - Jan in Hospitality & Tourism (+0.3% y/y) and Call Centre & Customer Service (-0.1% y/y) around the same level as a year ago. This is consistent with the employment component of the Performance of Services Index (PSI), which is hovering just below the breakeven mark at 49.1. Offering some hope, the PSI employment appears to be trending higher and QSBO service sector employment intentions have lifted further to be well above their long-term average.

SEEK Disclaimer: Data is provided by SEEK and includes the SEEK Employment Index (SEI). All data is trend unless otherwise stated. The Data should be viewed and regarded as standalone information and should not be aggregated with any other information. The Data is provided in summary form and while care has been taken in its preparation, SEEK makes no representations whatsoever as to its completeness or accuracy. SEEK expressly bears no responsibility or liability for reliance placed by you on the Data or from the use of the Data by you. The SEI measures only new job ads posted within the reported month to provide a clean measure of demand for labour across all classifications. The SEI may differ to the job ad count on SEEK's website due to a number of factors including: 1) seasonal adjustments applied to the SEI; 2) the exclusion of duplicated job ads from the SEI.

The Covid-19 pandemic led to a high level of volatility in labour market data between April 2020 and March 2022. As a result, caution is recommended when interpreting trend estimates during this period as large month-to-month changes in variables generated multiple trend breaks.

The applications per ad index contains a series break at Jan 2016 when the calculation of this series changed from using gross variables (inclusive of all SEEK job listings) to net variables (removing duplicate job listings). This change has a negligible impact on recent data points, but caution is recommended when interpreting data immediately following the series break, and particularly in 2016 where growth rates have not been adjusted for the series break.
